

# Game Plan

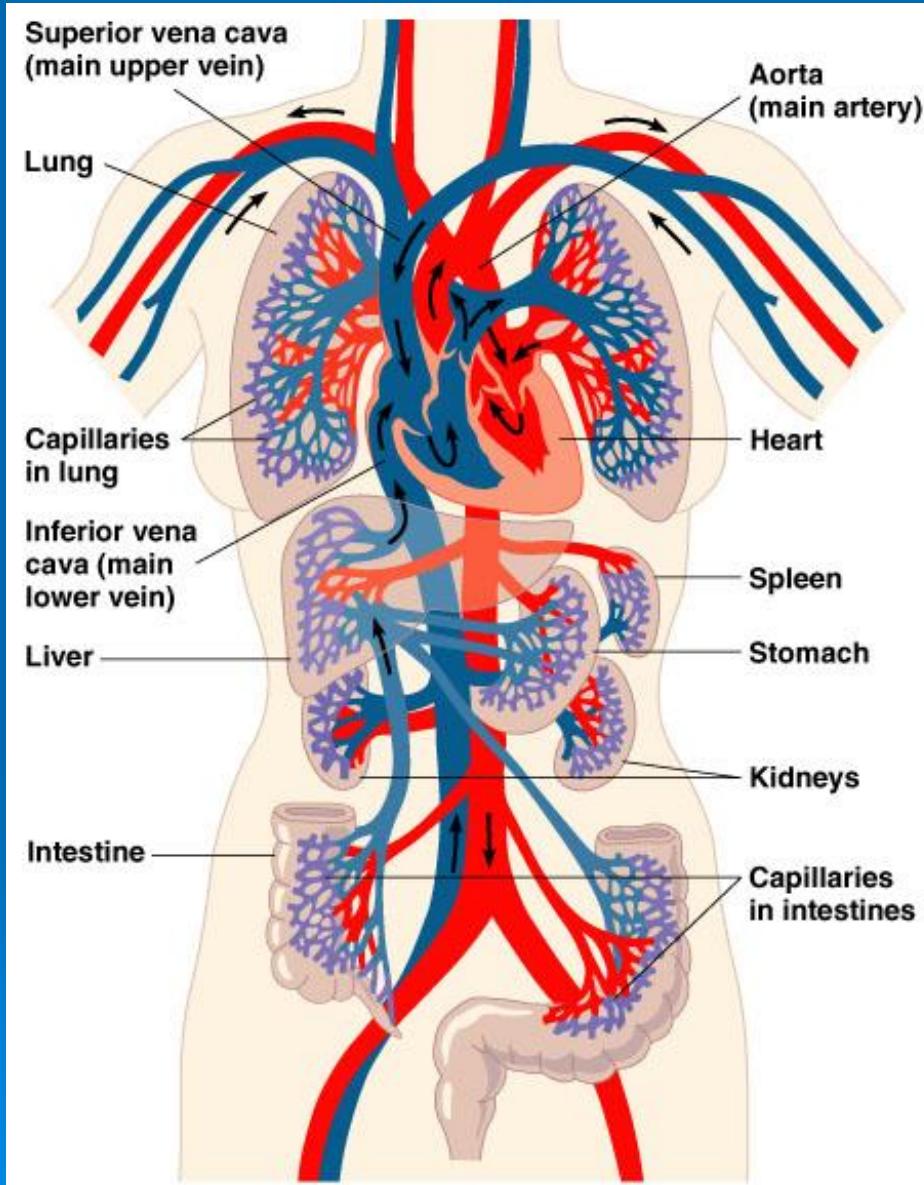

## Lecture

Cardio/ lymphatic systems  
Bacterial diseases  
Viral diseases  
Protozoa diseases  
Helminthic diseases

## Lab

Major Unknown  
Dental Microbiology

# Circulatory system

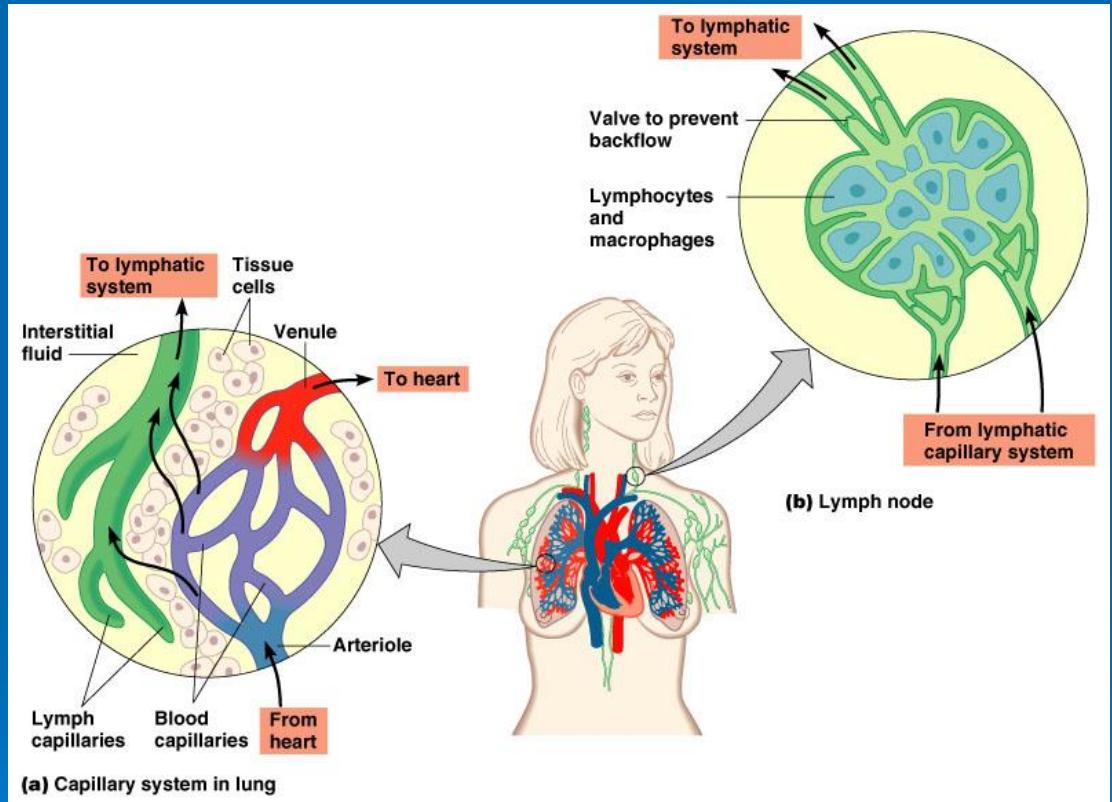

## Components:

- Heart
- Blood vessels
  - Arteries
  - Veins
  - Capillaries
- Microbes and toxins persisting in blood=  
**septicemia**
- Systemic inflammatory response syndrome=  
**sepsis**

# The lymphatic system

## Components:

- Lymph capillaries
  - Collects plasma/interstitial fluid/microbes from tissues
- Lymphatics lead to lymph nodes
  - Macrophage, T and B cells reside here
- Swollen lymph nodes are **buboës**

# Lymphangitis and septicemia/ sepsis

Figure 23-2 Microbiology, 6/e

# Infective endocarditis

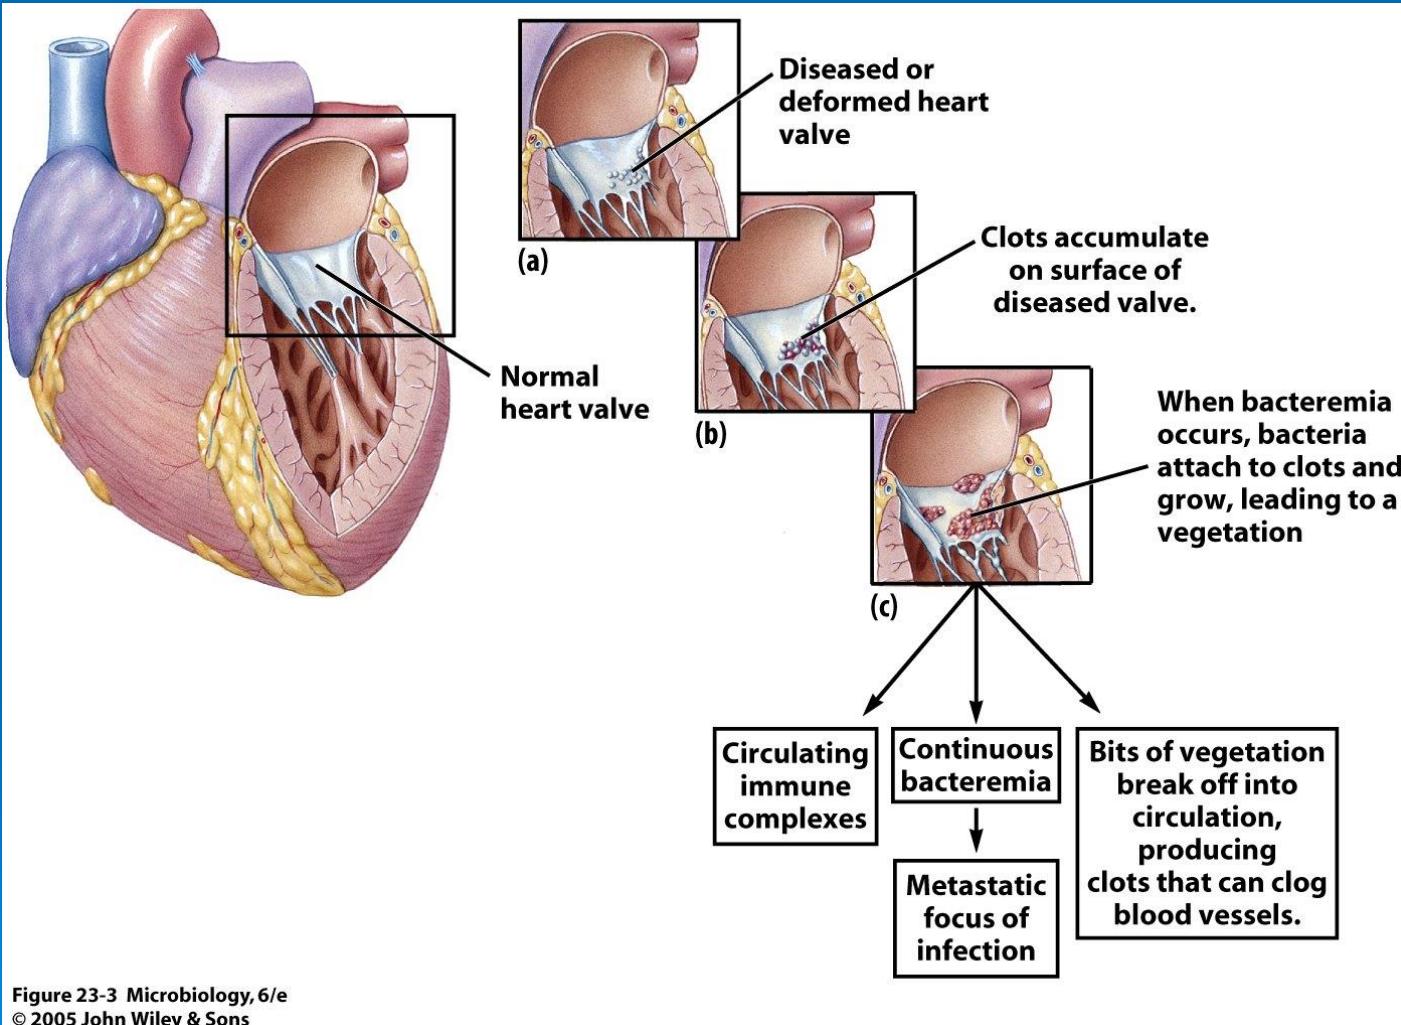

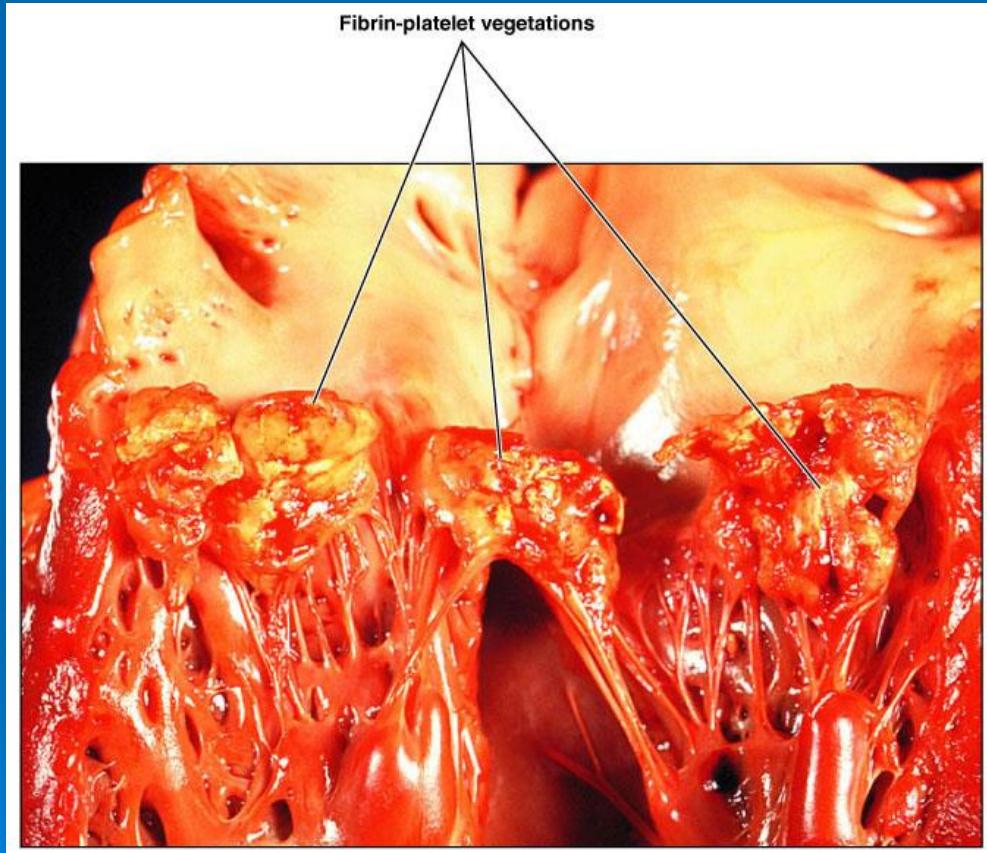

Figure 23-3 Microbiology, 6/e  
© 2005 John Wiley & Sons

# Infective subacute endocarditis

## Symptoms

Fever  
Heart murmur  
Fibrin platelet vegetations

# *Bacillus anthracis*- anthrax

Figure 23-7 Microbiology, 6/e  
© 2005 John Wiley & Sons

# *Yersinia pestis*- plague

## Types

Bubonic plague

Septicemic plague

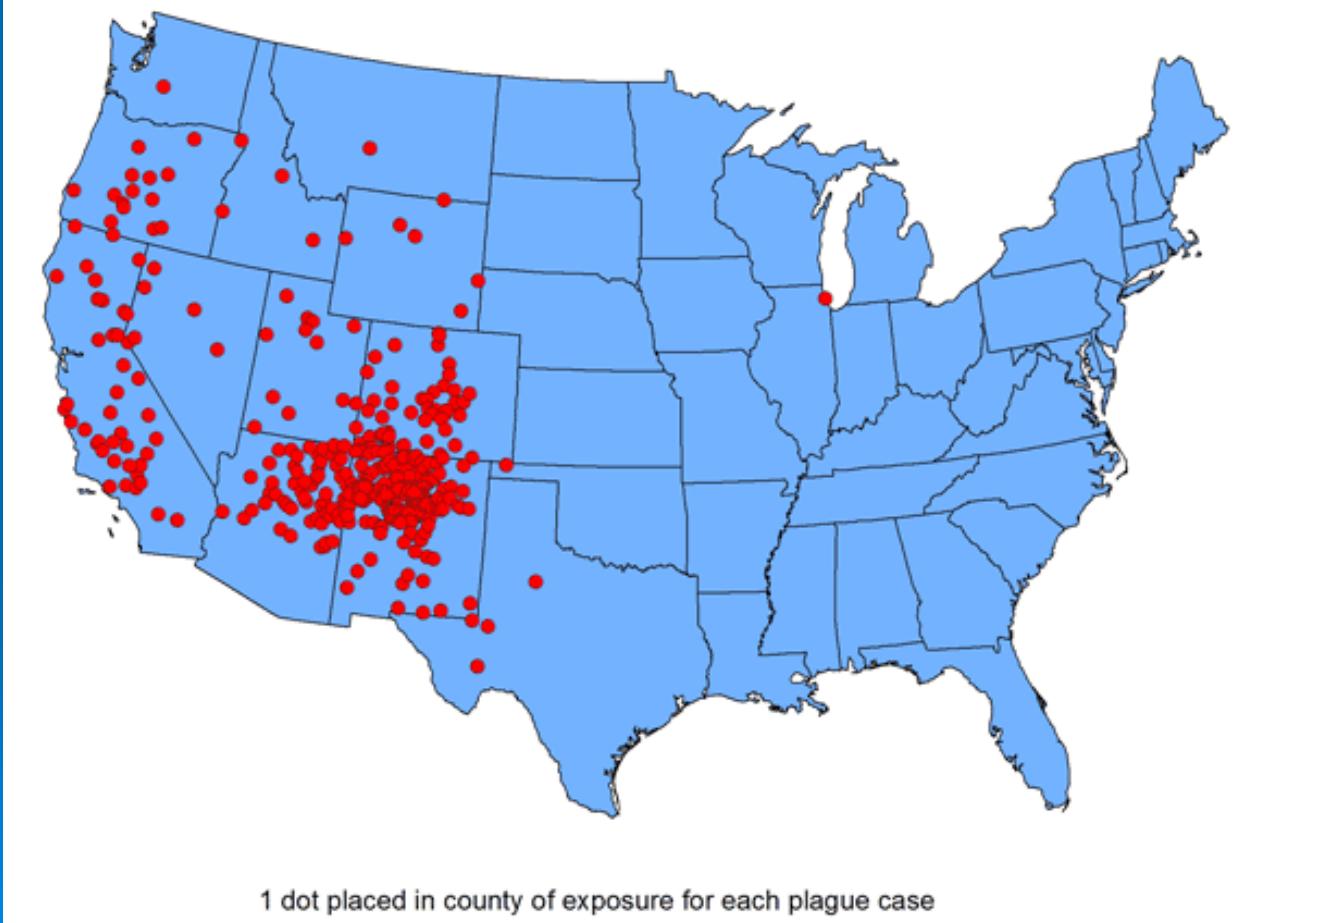

Pneumonic plague

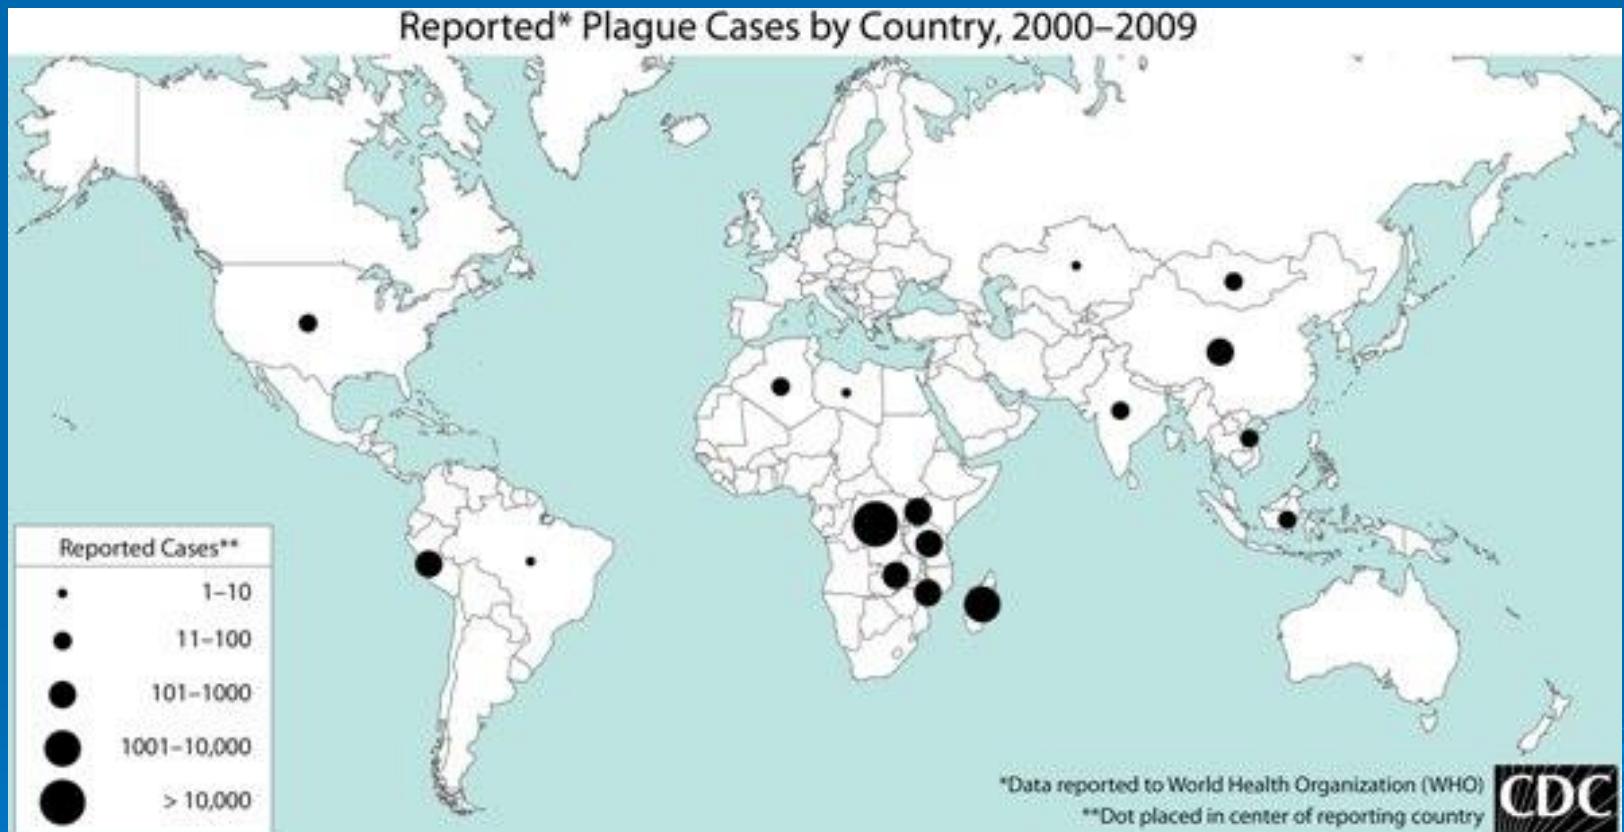

Figure 23-9 Microbiology, 6/e  
© 2005 John Wiley & Sons

# Human US Plague distribution

Reported cases of human plague--United States, 1970-2012

# World-wide plague distribution

# *Rickettsia rickettsii*- Rocky Mountain spotted fever

## Symptoms

Typhus infects endothelial cells  
of vascular system  
Rash similar to measles, but  
also on hands and feet  
Fever and headache  
Kidney and heart failure (3%)

# Viral hemorrhagic fevers

<u>Classic</u>	<u>Virus</u>	<u>Vector</u>	<u>Reservoir</u>
Yellow fever	Flavivirus	<i>Aedes aegypti</i>	Monkeys
Dengue & DHF	Flavivirus	<ul style="list-style-type: none"><li>• <i>A. aegypti</i></li><li>• <i>A. albopictus</i></li></ul>	No known reservoir
<u>Emerging</u>			
Marbug	Filovirus	<ul style="list-style-type: none"><li>• Monkeys (?)</li></ul>	
Ebola	Filovirus	<ul style="list-style-type: none"><li>• Monkeys (?)</li></ul>	
Lassa fever	Arenavirus	<ul style="list-style-type: none"><li>• Rodents</li></ul>	
Argentine hemorrhagic fever	Arenavirus	<ul style="list-style-type: none"><li>• Rodents</li></ul>	
Bolivian hemorrhagic fever	Arenavirus	<ul style="list-style-type: none"><li>• Rodents</li></ul>	
Hantavirus pulmonary syndrome	Hantavirus	<ul style="list-style-type: none"><li>• Rodents</li></ul>	

# Epstein-Barr Virus (herpes virus 4)

## EB Viral diseases

Burkitt's lymphoma

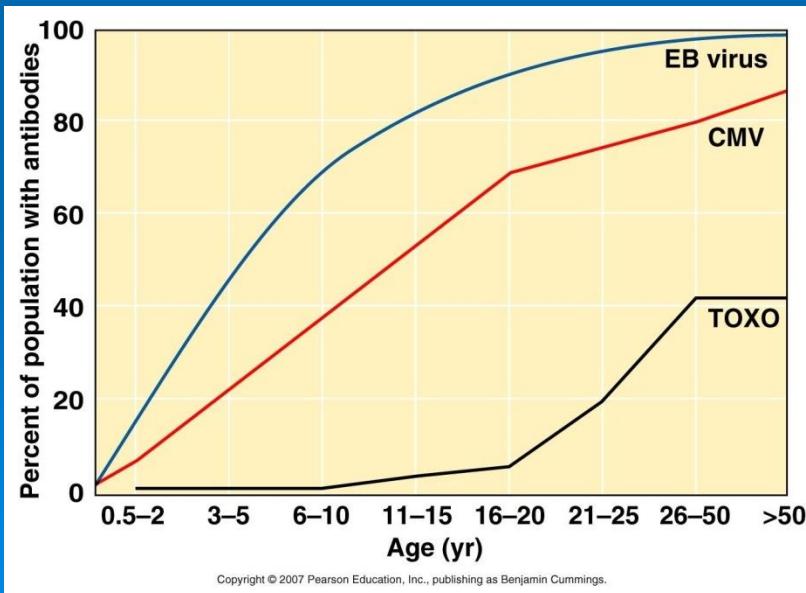

Infectious mononucleosis

Possibly:

MS

Hodgkin's disease

Nasopharyngeal cancer

# Leishmaniasis

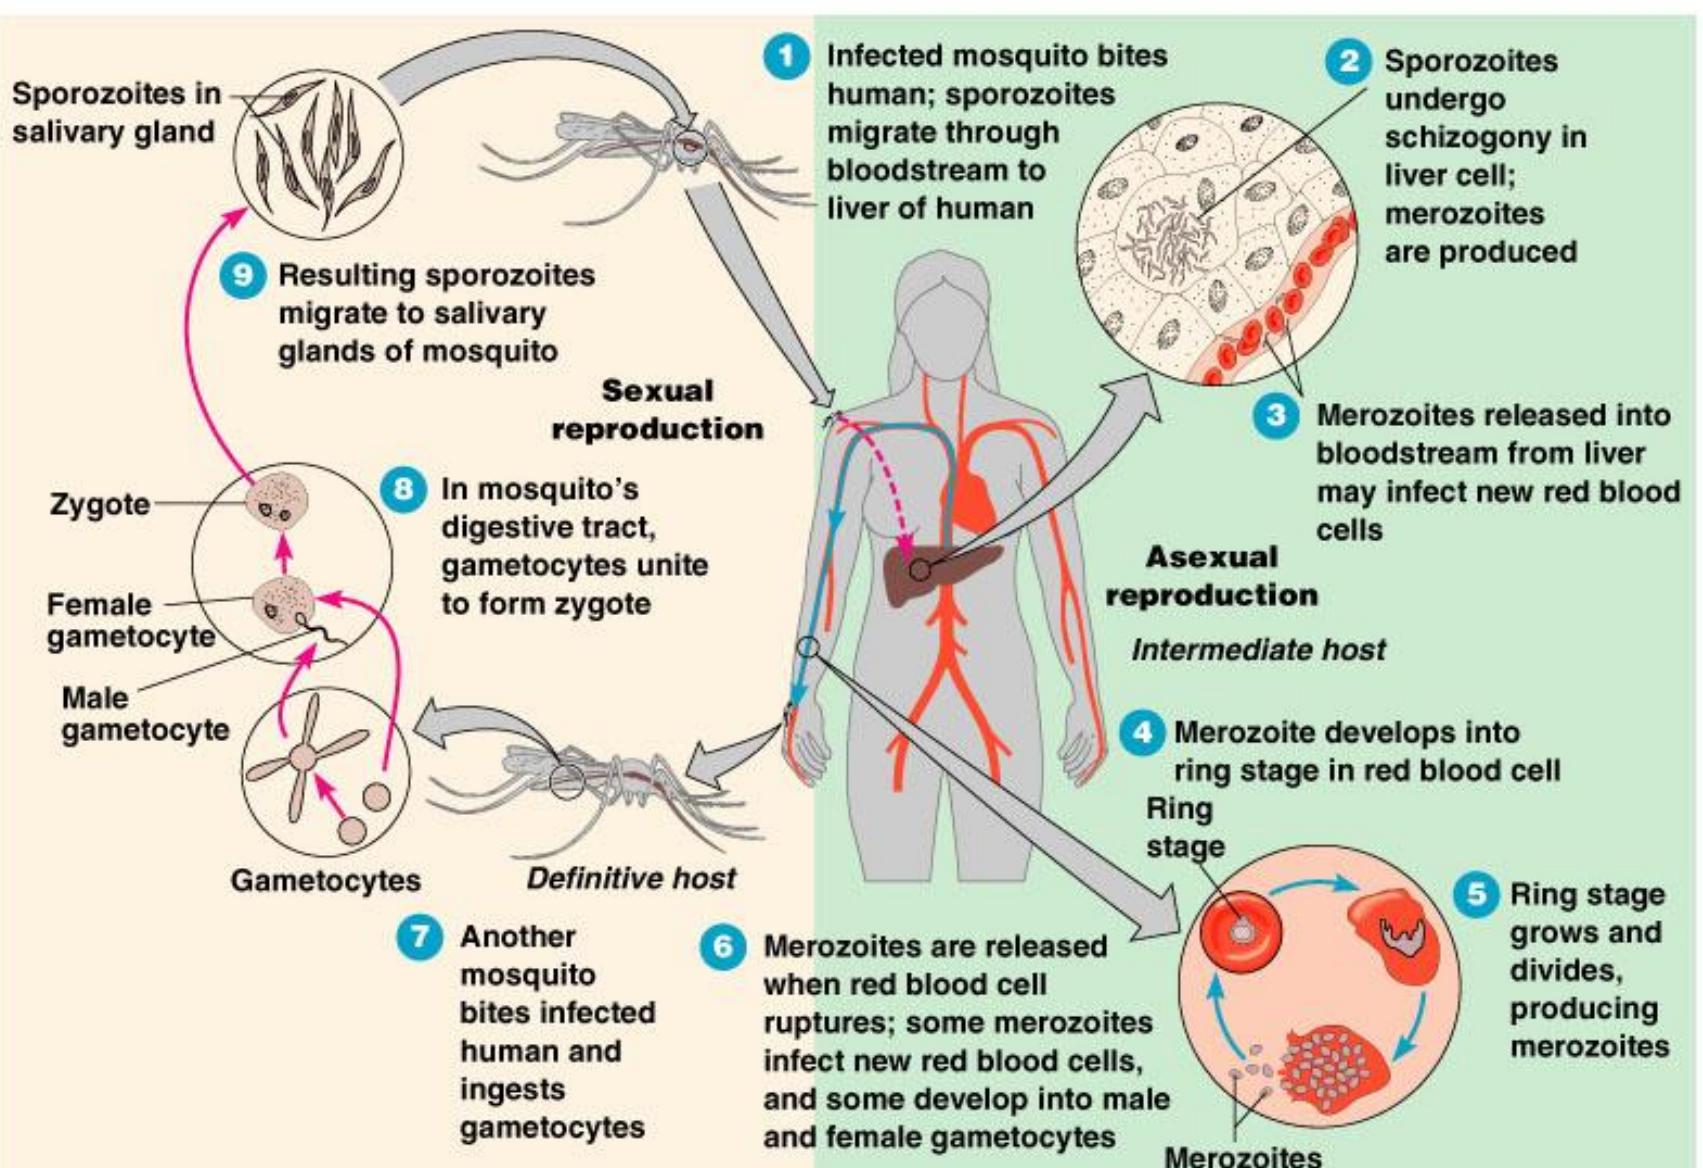

Figure 23-20b Microbiology, 6/e  
© 2005 John Wiley & Sons

# Leishmaniasis

<u>Disease</u>	<u>Visceral leishmaniasis</u>	<u>Cutaneous leishmaniasis</u>	<u>Mucocutaneous leishmaniasis</u>
	Fatal if untreated	Papule that ulcerates and scars	Disfiguring
Causative agent	<i>Leishmania donovani</i>	<i>L. tropica</i>	<i>L. braziliensis</i>
Vector	Sandflies	Sandflies	Sandflies
Reservoir	Small mammals	Small mammals	Small mammals
Treatment	Amphotericin B or miltefosine	Amphotericin B or miltefosine	Amphotericin B or miltefosine
Geographic distribution	Asia, Africa, Southeast Asia	Asia, Africa, Mediterranean, Central America, South America	Rain forests of Yucatan, South America

# Malaria

# *Wuchereria bancrofti*- filariasis or elephantiasis

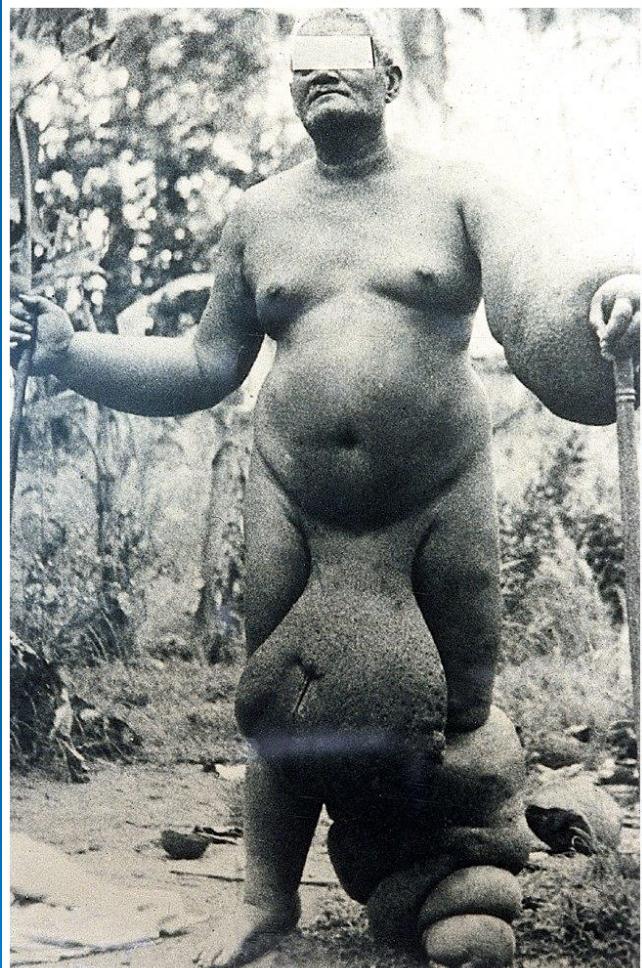

Figure 23-5a Microbiology, 6/e  
© 2005 John Wiley & Sons

## Characteristics

Round worm transmitted by mosquito  
Peripheral BV during night, deep vessels  
during day  
Blockage of lymph vessels leads to  
elephantiasis

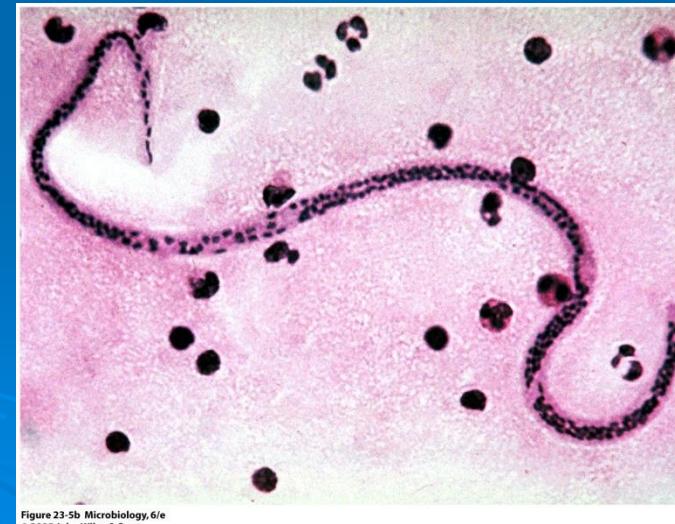

Figure 23-5b Microbiology, 6/e  
© 2005 John Wiley & Sons

# HIV
